

Technical Annual Report 2020

This year the Technical part of LSU Media has been hard at work ensuring everything is in place for the average volunteer to enjoy LSU Media to the highest level they can.

We have successfully moved office space this year and this posed many technical challenges, most notably the moving of the LCR server, which has been an ongoing project between Jack Connor-Richards and Jack Anderson.

Jack Connor-Richards has singlehandedly developed a new Caspa CG graphics package that we have used for both the General Election Results Night and the Executive Elections this year.

We have also worked to improve LCR and within this LCR now broadcasts a hourly news update.

As with every year, we have completed general maintenance and have renovated the Aura Studio with new paint, lighting, and sound panels.

This year we have achieved a lot, but there is still a long way to go until the office is at full capacity of operations.

Ben

Technical Officer 2019-20
